Mission Design Document

Introduction

Agent 4-27, do you copy?

Good work on your last mission. Although we were unable to uncover the whereabouts of the missing persons over the last week, you've found some very valuable information. Thanks to you, we've uncovered some kind of correlation between the place of birth, physical characteristics, and wealth status of the more recent victims of these disappearances. We can say for certain now that this is not a simple coincidence; it's all premeditated. Whoever is responsible for these kidnappings seems to be targeting different groups of people for several weeks at a time, and it looks like they've just made their switch. According to the most recent missing person reports, the perpetrators are now targeting upper-middle class able-bodied men between the ages of 30 and 40 who are taller than 5' 10.

As I am sure you already know, our colleague Agent 2-86: Harry Stenley, who fits cleanly into this class of new targets, went missing two days ago. Headquarters requested that we not attempt to locate him, but I just can't let this slide. And I know you feel the same. Thankfully for us, I still have his location active on my system. He seems to be somewhere underneath CloudWorks Casino. Yeah, it's a casino resort owned by that new hotshot tech company. Not sure why Harry would be there, but we don't have time for questions.

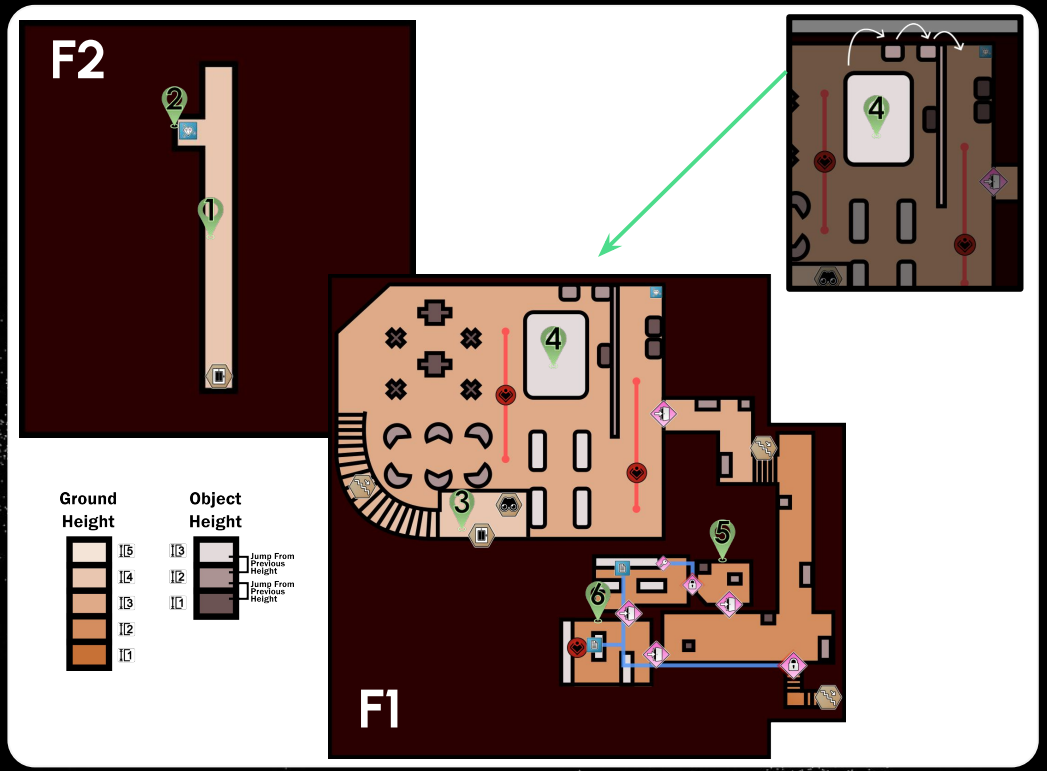

I've booked you room number 14 on the second floor of the hotel above the casino. Wait for the casino to close and find some way of getting beneath the main floor of the building. Whatever you do, DO NOT get spotted or engage with anyone you see down there. We don't know what you're up against, but I know you have this under control. Good luck.

Mission Restraints:

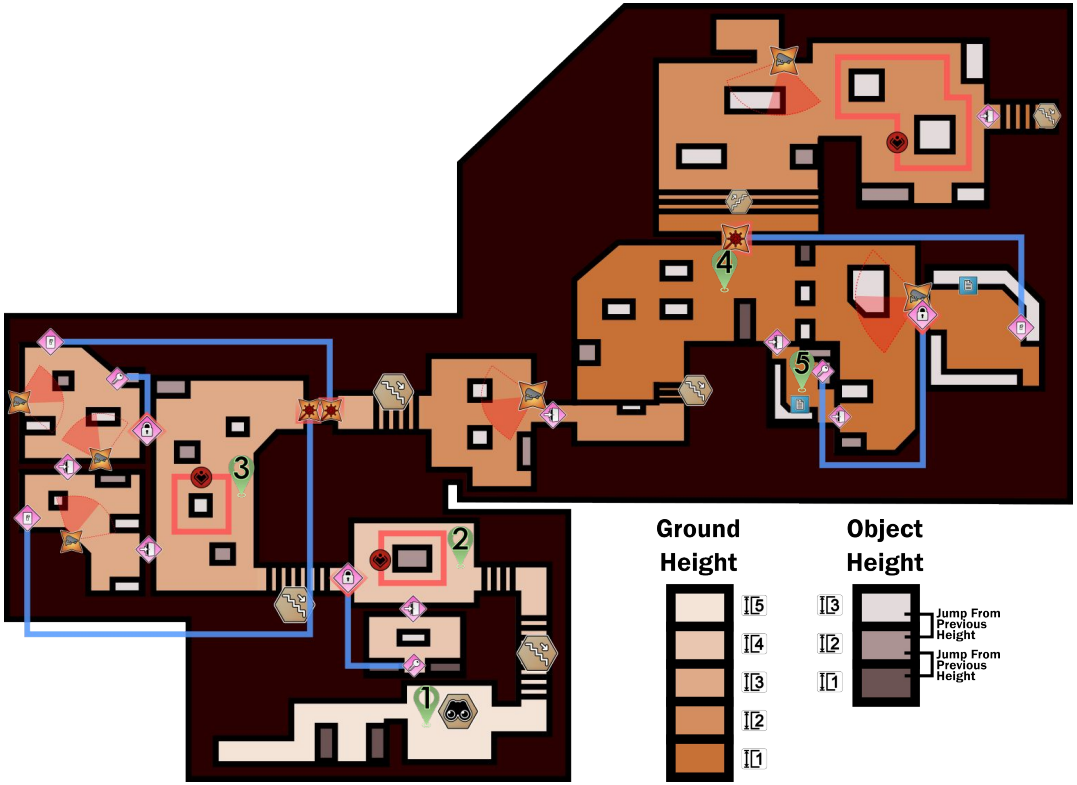

- Player cannot be spotted by any enemies
- Player cannot engage in combat with or otherwise incapacitate any enemies

Interior F1 & F2 - Overview

1. Hotel hallway. The player starts in the centre of the hall, right outside their room. The elevator leading to lower floors is at the end of the hall.
2. At the other end, the player can find some crafting material in the janitor's closet.
3. The player is presented with a vantage point right as they exit the elevator. They can analyze the layout of the casino floor and the routes of guards in the area.
4. Stanchions block a direct path to the northeastern corner of the room. The player can climb on the large game table and use nearby object stacks to jump over the stanchions.
5. Two documents that, when pieced together, allow the player to decipher the code for the locked door at the other end of the hall.
6. Side room for staff with a locked door leading to one of the two surveillance rooms. This allows the player to see the required document in the other room.

Interior B1 - Overview

1. Vantage point at the top of the stairwell for players to manage their options and plan their route as they descend.

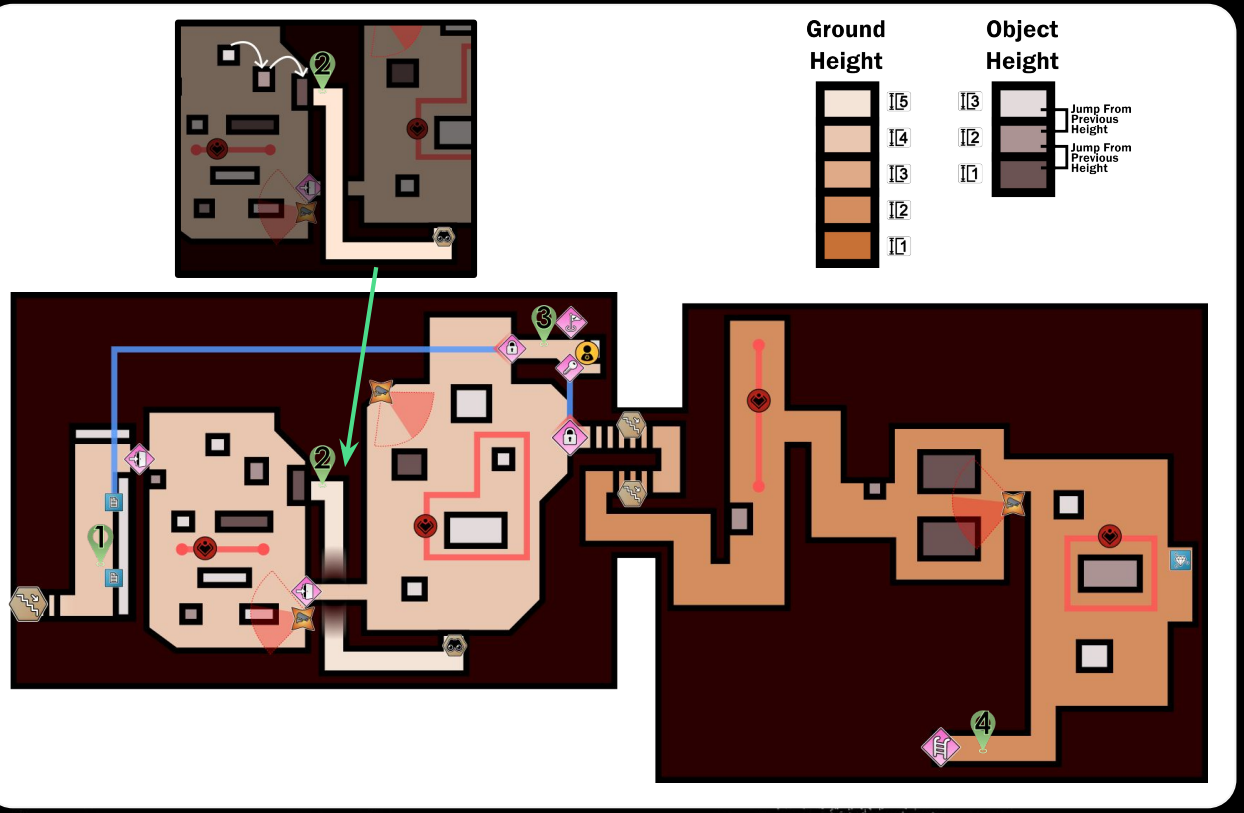

2. A single security guard paces around the area next to another surveillance room. Here, the key to enter the lower areas of the building can be found.

3. Two sets of lasers block the entrance to further parts of the laboratory. The nearby offices house the switches for each.

4. Another set of lasers blocks access to the lower floors of the laboratory. The switch for these lasers can only be found in the nearby breaker room.

5. Side room for important files. Contains the key to the breaker room, as well as documents containing story information, relating the environment to the overarching narrative.

Interior B2 - Overview

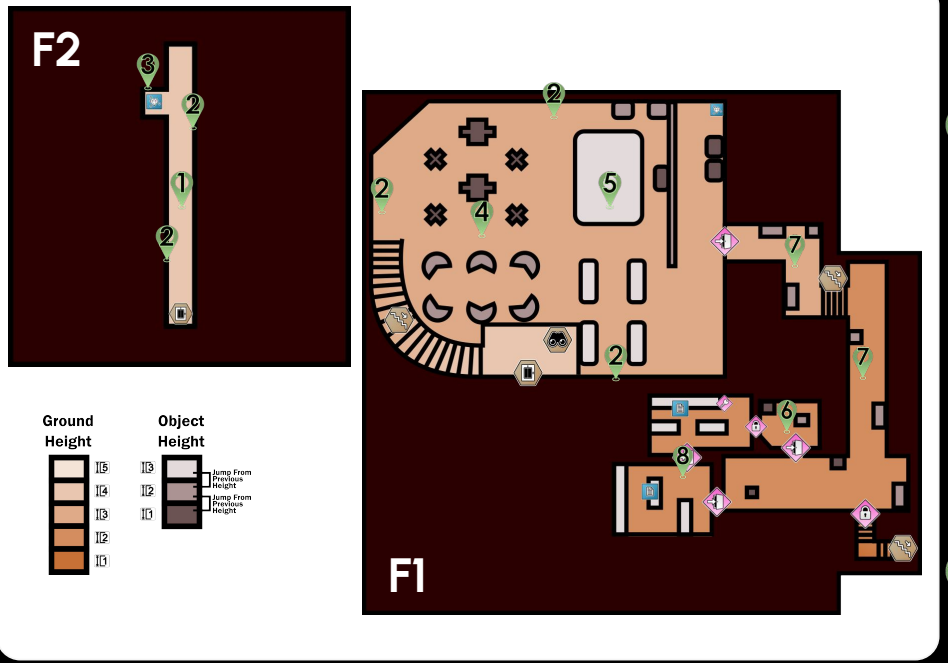

1. A slip of paper sits on the table containing a list of codes and associated names. Here the player can figure out the access code for Harry's cell.

2. The player can use nearby objects to climb up to a vent leading to the next room. The other end of the vent will provide the player with a vantage point for the next room.

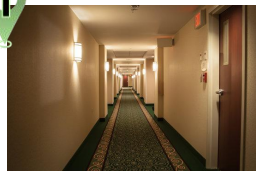

3. Objective complete! After talking to Harry, he will give the player a key that he was able to steal that leads to the utility tunnels further below.

4. A ladder in the utility tunnels that leads to a drainage tunnel. The player has successfully escaped the laboratory and completed the mission once they have climbed this ladder.

Interior F1 & F2 - References

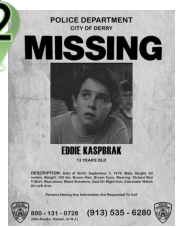

1

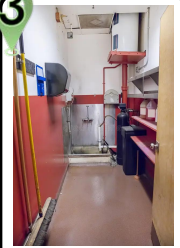

A hotel is attached above the casino.

2

Missing person posters will be scattered around the hotel and casino to demonstrate the severity of the kidnapping cases.

3

4

Various tall casino game machines are scattered across the room.

5

The casino contains large table games for additional variety for players. Stacks of chairs are placed nearby since the casino is closed.

6

The one of the back rooms is used as a mini storage area and break room for employees, containing tables and stacks of chairs.

7

The hallways of the back rooms will contain large storage crates, shelves and other storage compartments. The passage to the lab is behind a barred door.

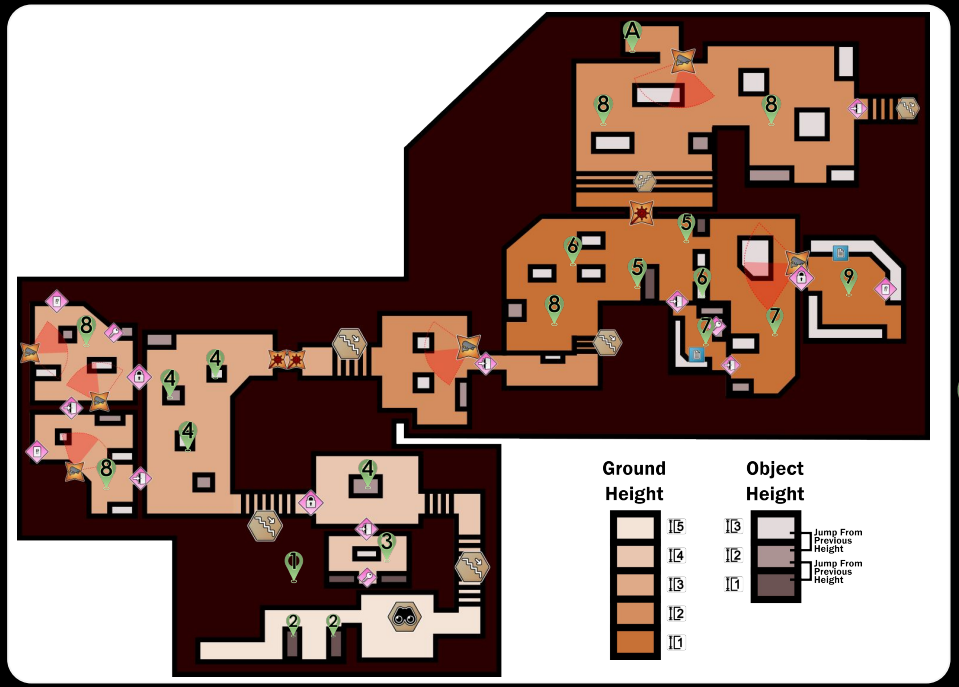

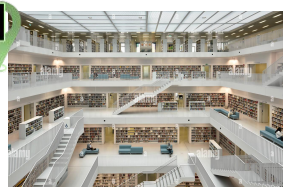

8

The control room is a tight space, most of the surface area taken up by long desks covered in computer devices and peripherals.

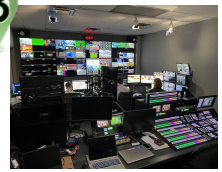

Interior B1 - References

A large open stairwell, connected by smaller flat segments which connect to other parts of the building.

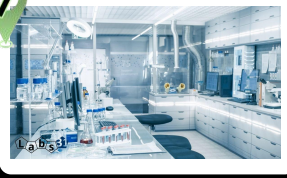

Stacks of boxes containing smaller lab equipment.

Various lab equipments, including equipment more specific to genetic engineering. These can include centrifuges, spectrophotometers, and glassware washers.

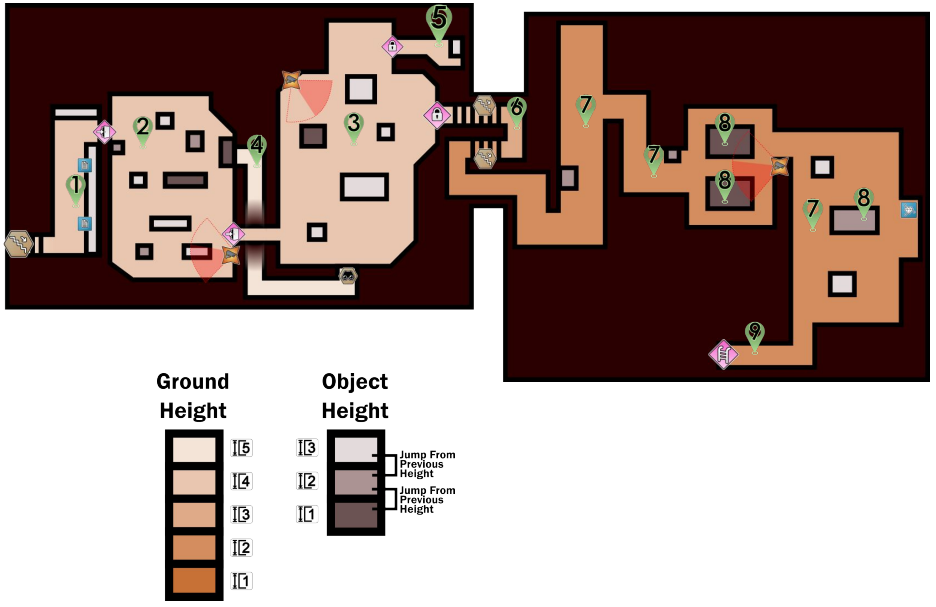

Refrigerators and freezers are also often used for mutagenesis and genetic engineering purposes.

Interior B2 - References

A window looks into the experimentation sector. Information about the specimens lies on the counter.

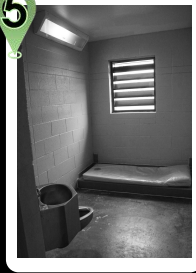

Human-sized experimentation capsules.

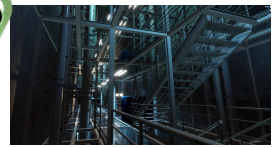

Specimen containment zone.

Inside of an air duct.

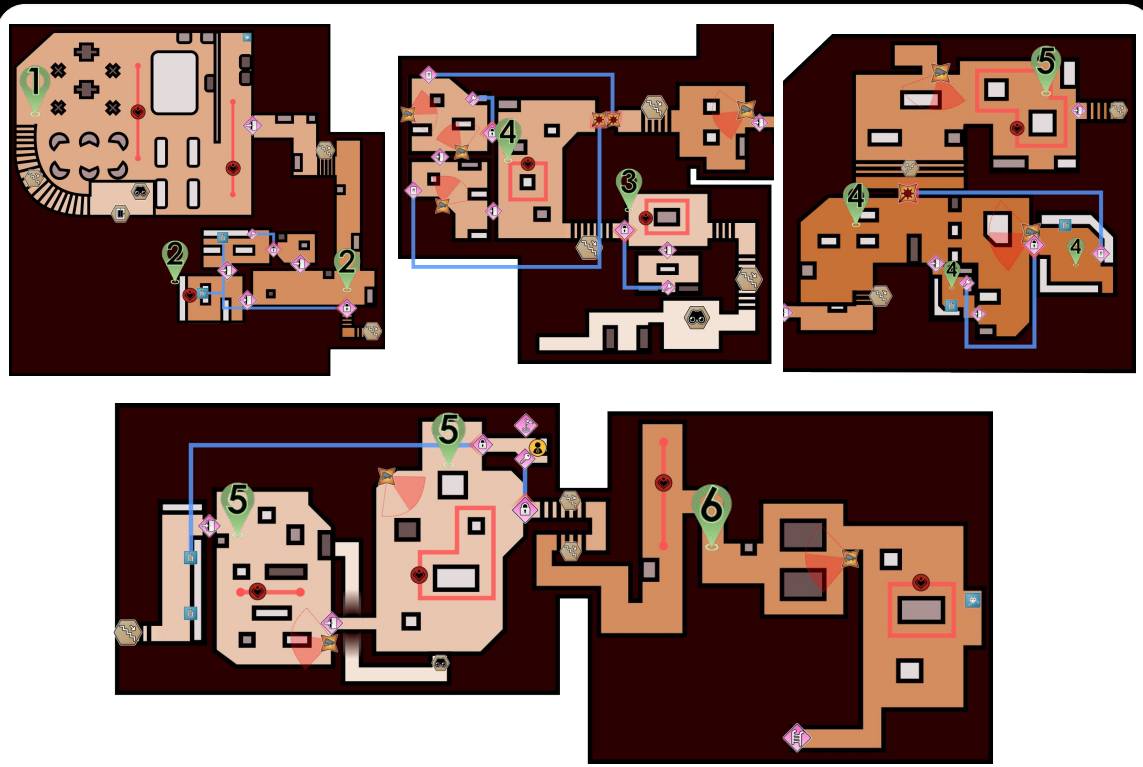

Walkthrough

1 **Find a way beneath the casino.**
Head down the elevator from your hotel room to the main floor. Sneak past the casino security guards and head into the back rooms to search for hidden access to lower floors.

2 **Decipher the code to the restricted door.**
The player encounters a locked door with a keypad leading further downstairs. Sneak into the control rooms nearby and find the code for this restricted door.

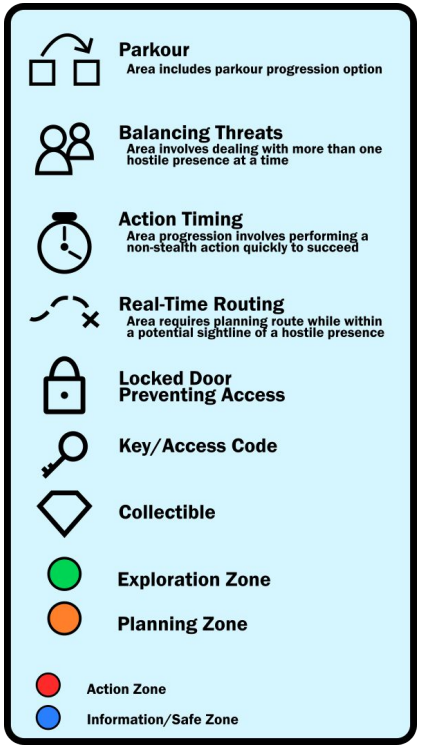

3 **Infiltrate the secret lab.**
Descend down the large open stairwell leading into the secret lab. Each section between staircases is patrolled by a guard.

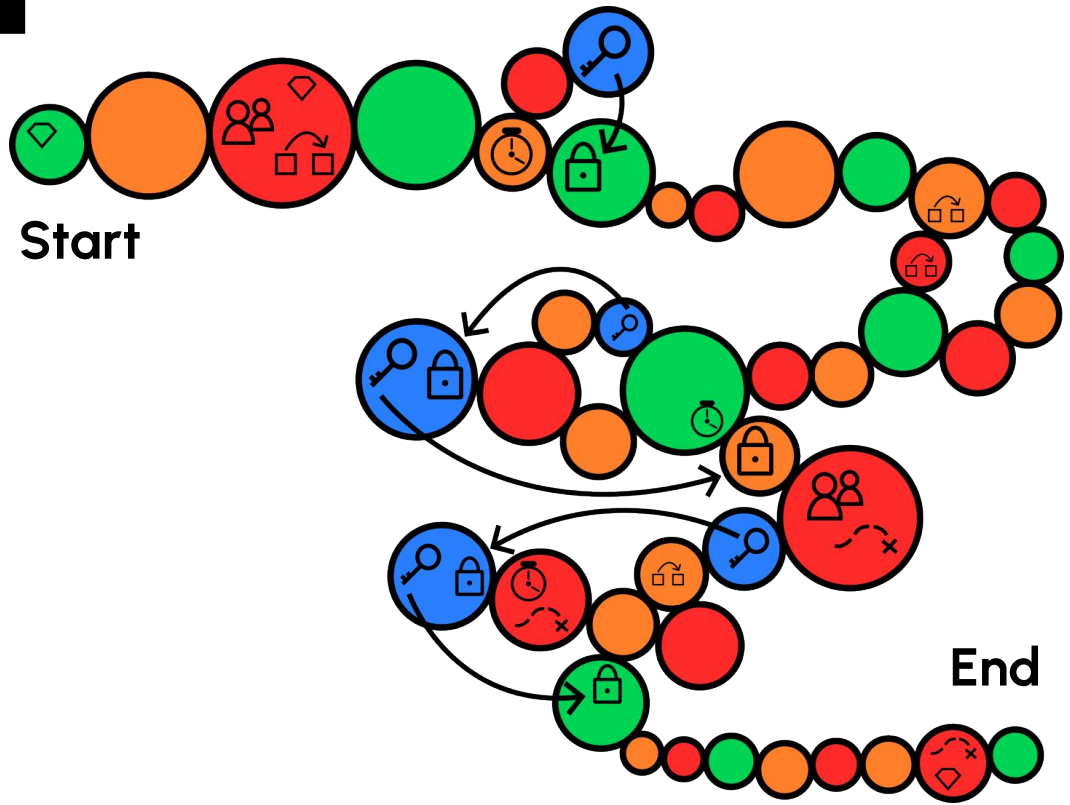

4 **Turn off the lasers blocking your path.**
Sneak around the lab and find a way to turn off the lasers blocking further access. The player will need to locate various switches to turn off the lasers and head deeper into the lab.

5 **Find where Harry is being held.**
The location tracker says that Harry is nearby. The player will progress further past lab guards until they reach the specimen containment zone. They will find a slip of paper with a cell door code and Harry's name on it. The player will need to weave past the tables and lab equipment to make their way to Harry's cell.

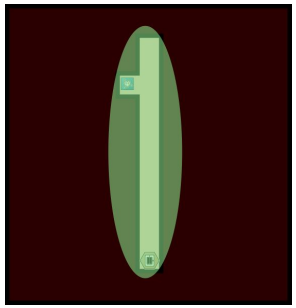

6 **Escape the lab.**
As the player and Harry make their way down the stairs, they hear a warning siren in the building altering all guards that one of the specimens has escaped. A timer begins and the player has 2 minutes to guide Harry to the nearest exit before the building enters full lockdown. The exit the player will use is a ladder leading into a drainage tunnel.

Tension Graph

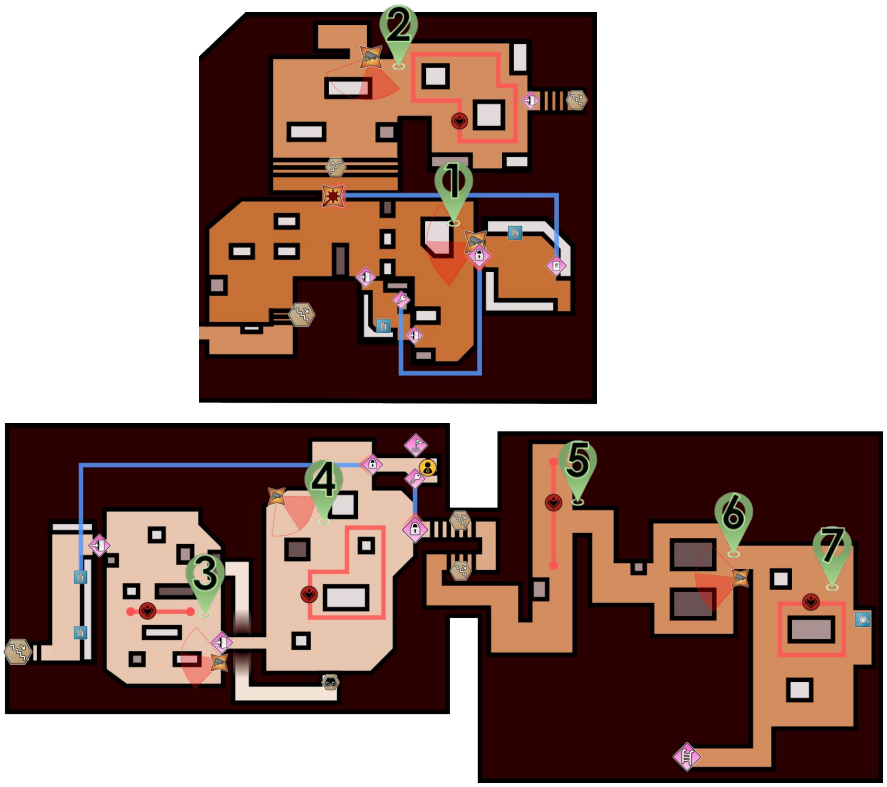

Threat Overview - 1

1. Two security guards for the casino during closing hours. Simple pacing back and forth in an open area.
2. Security guard sat at the front desk as they review the surveillance system. Will not turn around unless they hear something behind them.
3. Single security guard monitoring the locked entrance to the laboratory.
4. Lone scientist rummaging through stacks of equipment and boxes. Simple rotation between two separate stacks.
5. Collection of surveillance cameras for the office area. These require good timing and spatial awareness in tight spaces.
6. Simple surveillance camera overlooking the entrance to the proper laboratory rooms. Small challenge that lowers intensity.

Threat Overview - 2

1. Single surveillance camera monitoring the entrance to the breaker room. Requires good timing with more complex pathing.
2. Single camera surveilling the northern part of the room. In the next room, a scientist is rotating between various stations, running tests.
3. Lone scientist moving between a workbench and a bookshelf, performing research. Surveillance camera overlooks the exit of the room.
4. A security guard paces around the lab tables, keeping an eye on the prisoners. Surveillance camera in the corner limits simpler pathways to the objective.
5. Single maintenance worker walking back and forth, analyzing various cables.
6. One surveillance camera by the room exit, restricting easy movement around the exit space.
7. Maintenance worker managing the functionality of a generator. Preoccupied, but will turn if they hear quick movement nearby.

Notes/Thoughts

Ludonarrative Relevance

The goal with this level was to be a pivotal moment in the game's story. This would be the protagonist's first direct encounter with the primary antagonistic force of the game.

I wanted the player to feel that they were up against something much larger than they can handle at the moment, so I thought that a limited stealth mission would be perfect for this. This would help make encountering these forces in the future feel that much more empowering. This is why I decided to restrict the player to not engaging in combat or being spotted.

CloudWorks Creative - The hot new tech company

CloudWorks Creative is meant to be a high-end company that recently rose to extreme levels of popularity due to their inventions: selling attachments which enhance human abilities. These inventions range from day-to-day life to sports and even to aid with disabilities.

This corporation is, however, also behind the mysterious disappearances happening as of late, performing various tests on unwilling individuals and attempting to alter their genetics makeup. This level is meant to be the moment the protagonist discovers the company's affiliation with the many disappearances around the city.
